JAMES F. O'NEIL, *Steward*.
FRANK W. BOYNTON, *Treasurer*.
GEORGE S. HOLLINGWORTH, *Foreman Mechanic*.
FRED GULLON, *Farmer*.

The Commonwealth of Massachusetts

TRUSTEES' REPORT

To His Excellency the Governor and the Honorable Council:

The trustees of the Taunton State Hospital present herewith their seventy-first annual report, together with the superintendent's report, financial report and statistical tables.

In the past year no special appropriation approved by the General Court remained for the trustees' expenditure. The work of other special appropriations was completed the previous year.

In the past year, however, a small special appropriation was made on basis of report of building inspector from Department of Public Safety by an act of the General Court for expenditure previous to June 6, 1926, of the sum of \$3,600 to be divided among the following items: fire escape; additional water supply to infirmary; a continuation of stairways to basement of main building for fire protection. The first two items have already been completed.

We have had no construction since 1914 when accommodations for 100 women were made at Lovering Colony. At that time there were 1145 patients cared for in the hospital. At the end of present statistical year, 1421 patients are cared for, an increase of 24% in population without any construction for enlarging housing facilities.

Over-crowding was spoken of in report of 1917 and there has been an effort made ever since that time to bring to the attention of the General Court the necessity for increasing facilities for the care of our patients. Plans of construction have been submitted and last year a definite program was laid out but no action was

taken. This year we are again submitting a program for increasing capacities for care of our unfortunates which includes store house, acquiring property on Albro Avenue, and superintendent's house; the latter is requested as a means for relieving congestion of officers' quarters and dining room facilities; the Albro Avenue property to be a means of housing employees and making room for patients' care; the storeroom as a means for revamping an ancient and inadequate kitchen with the construction of a congregated dining room, thus releasing present dining room space for dormitory purposes. After a considerable study it is estimated that the proposed changes of utilizing space now used for dining rooms would make an increase in dormitory space for the accommodation of about 250 beds. At the Department of Mental Diseases estimated cost of construction, namely, \$1,500 per capita, this would warrant an expenditure of at least \$375,000 for the projects proposed.

There is a great necessity for sprinkler system for fire protection, a bridge to connect Albro Avenue property, and the acquiring of Rogers' property to adequately complete our farm unit at the Borden Colony, Raynham, so that we may have pasture, there being no pasture facilities whatever at present.

In our 1924 budget there has been expended from a sum of \$61,544.41 for repairs and renewals all but a sum of \$277.51. Of this total, a sum of \$25,000 was appropriated for renewal of roof of original building completed in 1853. This work has been done on such a basis that by means of careful expenditure and judicious care of money the whole original building has been covered with Monson slate, copper ridges, valleys, metal skylights replacing wooden ones, at about two-thirds of original estimated cost of work.

We are requesting a considerable sum of money for the coming year for continuation of repairs, as repairs and renewals are urgently needed to maintain a structure that is old and of necessity must have a great deal done in the way of repairs, not only to modernize our plant but to maintain such appurtenances as must be replaced from the consequences of wear of time and weather.

Our hospital quota of mechanics is only sufficiently large to carry on the work of maintenance of repairs. Any special appropriations or repairs and renewals that have to be added to the regular work of our force is a burden that is carried to the neglect of our ordinary maintenance repairs, and we urgently request that money appropriated for repairs and renewals and special work be sufficiently large and as estimated so that we may be able to employ labor for this work outside our regular force.

This Board desires that your attention be called to the matter of care of female group of mental cases classified as defective delinquents. A considerable group of these cases are regularly committed to this hospital, 25 or more cases having been inmates in the last year. This group is a problem that is a menace and a danger to the Schools for Feeble-Minded. They, for obvious reasons, are distinctly a foreign problem to the strictly mental hospital as well, and we urge the necessity of plans for their segregation under a disciplinary institution suitable to their needs and separated from an institution of our type.

The death of our associate, Mr. Simeon Borden, who died on January 16, 1924, having been a trustee and valuable advisor since his appointment by His Excellency, Governor Eben S. Draper in 1909 is a serious loss. For fifteen years, he gave unsparingly from his busy life a sufficient time to master the many details of the hospital work, to investigate each matter brought to his attention and to suggest improvements in the work being carried on. His judgment was valued by his co-workers; his interest in the Board's labors rendered his service noteworthy, and the State of Massachusetts no less than this hospital lost a valued official in his passing.

To succeed him has been appointed, Mr. Asa A. Mills of Fall River.

There has been lost to the Staff by resignation, John J. Thompson, M.D. and Fannie C. Haines, M.D., Senior Assistant Physicians, Wilfred H. Baines, M.D., Pathologist, and Mr. Stephen Tracy, Steward.

There has been appointed to the Staff during the past year, Harry M. Baker, M.D., Fernand Longpre, M.D., George Ravenelle, M.D., as Assistant Physicians.

Mr James O'Neil was appointed as Steward. Clarence M. Kelley, M.D., has been promoted to Senior Assistant Physician and Samuel Tartakoff, M.D., to Senior Assistant Physician, Pathology.

We, the undersigned, respectfully submit the above report.

ARTHUR B. REED, *Chairman*.

SUPERINTENDENT'S REPORT

To the Trustees of the Taunton State Hospital:

I respectfully submit the seventy-first annual report for year ending November 30, 1924.

The Statistical tables cover the period included between October 1, 1923, and September 30, 1924.

MOVEMENT OF POPULATION

On October 1, 1924, patients in the hospital and family care numbered 1428, — 688 men and 740 women, — an increase of 13 patients over the corresponding date of previous year. There are 108 men and 105 women on visit and escape. During the year there were admitted, by first admission 188; by readmission 84; by transfer from other institutions 5; making a total received of 422. There have been discharged during the year 385 as follows: as recovered 27, as improved 112; as not improved 45; as not insane 20; transfers to other institutions under the supervision of the Department of Mental Diseases 22; by death 159. The total number under treatment during the year was 2,027, — 1016 men and 1011 women. The daily average number of all patients actually in institution during the year was 1400. 1922, — 678.1153 men and 722.0769 women. In family care we now have 13 patients, 2 men and 11 women.

In the past year it has been increasingly obvious that a difficulty in finding and classifying properly a group of patients to be boarded out is becoming more and more marked. I question the advisability of having boarding out patients except in rare instances, inasmuch as this hospital is so situated and so constructed that it has two dependent colonies where only such patients as can be allowed full parole can be cared for. One of these colonies is for men and one for women and the facilities for caring for such patients is sufficiently large so that it is even now difficult to find the type of patient which can be properly classified in such colonies. It is only from this group that we would select boarded out patients. It seems to me much better to care for them at the Colonies than boarded out, especially when we consider the expense attached to the travel and transportation not only for placing such patients but for their visitations afterwards, and in case of illness or difficulty their removal from place of boarding out and return to the hospital, and in cases of acute illness the necessity of requiring the care of some local physician especially in the winter season when travelling is such that we cannot reach or care for them by our own physicians. I am firmly convinced that any money that can be apparently saved as a bookkeeping entry if considered practically would have no argument in favor of boarding out, and it is my intention in the coming year to have less instead of more boarded out patients.

MEDICAL ADMINISTRATION

In the past year we have constantly had Staff Conferences each morning at which Conferences, problems concerning patients are settled, the Superintendent presiding at these meetings. The purposes of the Conference is to cover the following points: All new patients admitted are presented for diagnosis and disposition from the various forms of commitment on admission to the hospital. The various physicians of the Staff present their cases from the various services for consideration of treatment, trial visit or discharge whenever a patient presents such symptomatology that disposition can be considered. Conferences are also used on an average of once a month for the presentation of some special medical

question of interest to us as a problem that concerns psychiatry or general medicine. An occasional Staff meeting is also devoted to Social Service problems. Staff Conferences have been greatly enhanced in the past year by the advantage obtained from a completely functioning laboratory with pathologist in charge, so that cases presented can be considered with full physical and laboratory findings as well as mental examination. A properly functioning x-ray laboratory with additional room for a developing of x-ray and photographic plates has also added a stimulus to scientific work together with the fact that equipment has been provided for work in blood chemistry and metabolism. Cases are now coming to Conference with clinical and laboratory findings very completely elaborated in the case record. The case record also includes a photograph of each patient for purposes of identification and comparison at a later date. The Staff has apparently accepted the stimulus of advantage obtained by such facilities and our Conferences have had an increasing interest from a scientific as well as utilitarian point of view, and the disposition of cases for discharge or trial visit has been increased.

REPORT OF PATHOLOGICAL LABORATORY

Urinalyses 937, spinal fluids 192, white blood counts 23, complete blood counts 104, smears 93, cultures 64, sputa 62, feces 12, autopsies performed 48.

During this present fiscal year certain accomplishments merit mention. With the exception of a very few patients incapacitated by physical or mental infirmity, all patients have been photographed and their photographs entered as a part of their hospital record.

Spinal fluid examinations have been made more complete by the incorporation as routine measures of two tests, definitely of diagnostic value in certain cases. These tests are (a) The Acetic Anhydride Sulphuric Acid Test and (b) The Mastic Test.

An apparatus for the determination of the Basal Metabolic rate has been instituted, and the metabolism determinations are now being made in all cases presented by the clinical services.

During the year a method was instituted in the Operating Room whereby all cases with findings indicative of syphilis received treatment. The arsphenamine used was changed to sulpharsphenamine, this being administered intravenously, intramuscularly and subcutaneously. The figures recorded in the table below indicate the activity of the Venereal Clinic together with some interesting results from the point of view of the serological changes produced.

In April, 1924, a group of luetic patients was chosen at random and each treated with sulpharsphenamine. Their serology was determined at the onset and again late in November of this year. The entire group remains under treatment at present. The findings are of interest in that in approximately 50% of the cases was a change produced in the blood Wassermann; in 20 cases a positive was reduced to a negative or a doubtful reaction, while in only 2 cases was a negative blood changed to a positive. The following table refers to blood Wassermann reactions:

1. Cases negative in April — still negative	9
2. Cases positive in April — still positive	16
3. Cases positive in April — now negative	16
4. Cases negative in April — now positive	2
5. Cases positive in April — now doubtful	4

The addition of x-ray to our list of procedures has been of decided advantage to both medical and dental services. Both services utilized this opportunity freely.

The deaths during the fiscal year numbered 158, of which 90 were male and 68 female. There were 48 autopsies. The following table gives number of deaths, autopsies and percentage autopsies.

Deaths		Autopsies	% Autopsies
Male 90	General average,	35	38.9
Female 68	30.3%	13	19.1

These figures show an increase in autopsy percentage over that of the few preceding years, even though during the fiscal year ending in November, 1923, there

were 53 autopsies as compared to 48 this year, for these were based on figures representing 23 more deaths than in a corresponding period of time ending in November, 1924.

In general, the services of the laboratory have been utilized to a greater extent than during the previous year, as indicated by an increase in the number of operations carried out.

OUT-PATIENT CLINICS

New Cases

	<i>New Bedford</i>		<i>Fall River</i>		<i>House</i>		<i>Total</i>	
	1924	1923	1924	1923	1924	1923	1924	1923

By Instructive Nursing Association	6	3
By St. Luke's Hospital	3	1
From other sources	12	6
	146	150

CONCLUSION

1. Considering the report of 1923 as covering a period of time equal to that in 1924, we find an increase in the cases seen in New Bedford and at the hospital and a decrease in those seen in Fall River.

2. Disregarding ex-hospital cases, one finds that there were 129 community cases seen in 1924 as compared to 118 in 1923.

3. The total visits in all clinics during the year exceeded those of the preceding year by 162.

4. In New Bedford alone, the visits of this year exceeded those of last year by 164.

5. During the year, the clinic, augmented in its personnel by the different hospital staff members in rotation, has, we feel certain, continued to maintain its firm contact with the community, no greater evidence of which is necessary than the figures recorded above.

SCHOOL CLINIC DEPARTMENT

	M.	F.	T.
1. New cases referred for examination	21	10	31
2. New cases completed	8	5	13
3. New cases incomplete	13	5	18
4. Old cases completed	26	20	46
5. Re-examinations	27	4	31

The above figures represent work in four towns: that is, all of those towns from which a request to examine children was received.

As 47 towns are in this hospital district, but $8\frac{1}{2}\%$ of the authorities made requests for examination.

By letter the authorities in all towns were informed about the project. In 3 towns by letter and by personal interview. Those in 3 other towns were especially informed about the project. None of these availed themselves of the services of the hospital clinic, emphasizing the necessity for the Department of Education to encourage the work if further work is to be done.

X-RAY WORK

There has been done in the past six months since the x-ray room has been in operation the following number of operations: Medical Operations: Male, 72; Female, 40; Total, 112. Dental: Male, 305; Female, 122; Total, 427.

OPERATING ROOM

In the operating room we have a very inadequate outfit for the care of such surgical cases as may occur in an approximate population of 2,000 persons. We have added to this equipment in the past year a fairly satisfactory set of instruments that we may do any laparotomy or ordinary surgical procedures. We have also purchased a gas oxygen machine. Our methods of sterilization are very inadequate. The quarters are very cramped and light is very poor. In the coming year I hope to alter these quarters to make some improvement but until construction is made either in the form of new building or additions are made to the present building, a really adequate and suitable operating room cannot be provided. The larger part of our work in the operating room is in the nature of dressings and the administration of arsenical preparations to our specific cases of which there have been the following treated:

	M.	F.	T.
Salvarsan injections	440	280	720
Mercurial injections	448	223	670
Bloods for Wassermann	327	245	572
Lumbar punctures.....	100	67	167
Greatest number of patients under treatment during any one month	80		
Smallest number of patients under treatment during any one month	63		
Average number of patients per month.....	73.3		

DENTAL REPORT

Bridgework: Preparation for, 3; Removed, 9; Set, 1. Cleaned and scaled, 743; Examined and charted, 682; Extracted, 1331. Fillings: Amalgam, 535; Cement, 27; Root canal, 15; Gold, 1; Silicate, 12; Temporary, 10; Zinc Oxide and eugenol, 226. Inlay: Preparation for, 4; Carved, 3; Set, 2. Plates: Impressions, 43; Made, 22; Adjusted, 125; Repaired 17; Cleaned, 108. Treatments: Formo-creosol, 11; Gums, 38; Howe's silver nitrate, 9; Pulp removed, 4; Post operative, 110.

Number of patients receiving dental treatment	3024
Number of operations performed on these patients	4518
Average number of operations per patient	1.46
Percentage of all patients with work completed	90.06%
Percentage of all patients unable to receive dental attention	4.16%
Percentage of all patients with dental attention needed	5.78%

HYDROTHERAPY

The new entrances to the hydrotherapeutic rooms have been completed and having been able in the last year to complete the building of cabinet baths, electrically heated, this added armament to the treatment of mental diseases by hydrotherapy has been greatly improved. Because of inaccessibility of entrances previous to construction of new ones the hydrotherapeutic work was practically nil but at the present time a considerable use is being made of this department as indicated in figures listed below, and we hope to have an increase in this treatment next year.

	M.	F.	T.
Hot foot baths	825	656	1,481
Salt glows	733	712	1,445

Females	2,675	10,640
Totals	2,842	15,640 $\frac{1}{4}$

SOCIAL SERVICE

Because the question arises frequently as to the purely economic value of a social service department in a mental hospital, statistics, this year, were compiled to show the amount of money saved the hospital through the special activities of the social service department. In addition to the routine work of taking histories from relatives who cannot come to the hospital, conducting investigations which aid in the making of correct diagnoses, and visiting the patient on trial from the hospital, all of which increases the general efficiency of the hospital and makes existence a little more comfortable for many patients, there are certain duties performed by the social service workers which could not be done as efficiently by any other department in the hospital and which do reduce the annual expense account.

For instance, relatives apply for the discharge of a patient. The patient is not well or only slightly improved. Unless home conditions are especially favorable, the physicians do not feel that it is advisable to send the patient away from hospital care. Social workers can go into the community to see the home conditions, to advise changes, to smooth over difficulties, and to make arrangements which enable the patient to leave several months earlier than he could otherwise. During this last year, fourteen patients were released under the above mentioned conditions. By counting the per capita cost of hospital maintenance as one dollar a day, it is estimated that this dismissal saved the hospital about \$2,000.00.

In several other cases, where there had been no request for discharge, the hospital authorities decided that the patients were well enough to leave. The social service department then got into communication with relatives, who either had lost interest in the patient or thought because he had been in the hospital a long time that he would always need institutional care, and made arrangements for them to care for the patients in their homes. If there were no relatives, the social workers found homes and places of employment. Over \$3,000.00 was saved in this way.

Patients on trial would frequently have to return to the hospital if there were no social workers to visit them, to interpret their difficulties to their families, and to act as safety valves for their pent up feelings. By counting only those where it is known definitely that the possibilities of social service supervision caused the relatives to delay return, it was found that \$6,000.00 was saved.

In two other cases, the patients were discharged as "not insane" because the outside investigation showed that they had foundation for their apparently paranoid ideas.

As the total amount saved is considerably more than the expenses and salaries of the department, it does seem as though social service is of economic value.

The above statements are made on the basis of a purely financial point of view. The humanitarian and routine advantage of Social Service is not here considered, and the above is not written in defense for the existence of Social Service but to bring out the point that there is financial advantage as well as humanitarian usefulness in a hospital of this kind for an increase in Social Service work in the near future, as well as reason for requesting, upon the basis of increase of population, an additional Social Service worker to the Staff.

SOCIAL SERVICE MONTHLY STATISTICS

I. NUMERICAL SUMMARY OF CASES:

Visits to Other Institutions:

TRAINING SCHOOL

An arrangement has been made in the past year through the Superintendent of Schools, with the approval of the School Committee of the City of Taunton, who have very graciously co-operated, providing a course in the night high school, giving upon completion of such course a certificate of the first year of high school work. According to a law recently passed it is necessary that a nurse present with her diploma of graduation, a certificate indicating that she has had one year of high school training or its equivalent. There are many pupils available for training as nurses who have not had this preliminary education and we feel very grateful to the Taunton School Authorities for their co-operation in providing such facilities and a goodly number of our attendants have availed themselves of this privilege and are taking this course at the present time which will enable them to qualify as graduate and registered nurses.

FARM AND GREENHOUSE

During the past year the work on the farm has been carried on very successfully by Mr. Fred Gullon, head farmer. During the year we have maintained a herd of cattle free from tuberculosis and have purchased additional stock for increasing our milk production. A new boiler has been installed for pasteurizing purposes and within a reasonable time we hope to have sufficient home milk supply from farm so that there will not have to be any outside purchase of milk. Our crops have done reasonably well, although certain items were affected by the severe drought in July and August. Our poultry plant has been increased and has been profitable so far, and it is hoped that an additional increase will be made to the plant in the coming year.

From our greenhouse there has been produced an increasing amount of potted plants and flowers for distribution on wards. Much satisfaction is expressed by patients as well as visitors to our wards in appreciation of the appearance of halls because of this added attractiveness.

OCCUPATIONAL THERAPY DEPARTMENT

In our occupational department we have increased our facilities to some extent and are working on plans for its further extension. We have already, through this department, increased the property of our wards with such products as are of advantage for purposes of decoration and utility. The department has a quota of three women rated as occupational therapists and they are assisted by several ward employees. We are maintaining a regular course for both men and women in the industrial building, also conducting classes upon the wards. These classes have increased and a great percentage of patients who are disturbed or indifferent will be provided with occupation for its therapeutic value and the advantage of this has already been made apparent in the improvement of this group of patients as to their mental and physical welfare. In many instances I am certain that we have been able through this Department to shorten the duration of hospital residences of many patients and also in many cases improved their mental status to a point where they have been able to take up industrial work in the hospital that is purely utilitarian rather than therapeutic, even though their condition does not warrant their leaving hospital care.

INDUSTRIAL DEPARTMENT

In our industrial departments there has been accomplished a very satisfactory amount of work, particularly in that part of the shops which covers the manufacture of mattresses, brooms, brushes and metal articles. Our shoe shop has produced all the shoes necessary for wear by our male patients and a large percentage of

shoes worn by our women. In our tailor shop there has been a new stimulus, in addition to the rug weaving and ordinary repair of clothing there has been a considerable manufacture of men's suitings. In our sewing room there has been a greatly increased production of bed linen and ward supplies, and there has been made also suitable dresses as well as underclothing for the women. A large and much complimented exhibit of our products was on display at Brockton Fair.

ENTERTAINMENTS

We have been able to hold regularly our dances each week, also moving pictures, and have been able to procure a very satisfactory type of picture which apparently is very pleasing to the patients. On holidays and at various other times we have provided special entertainments, especially in the summer when we have been able to have ball games and other outdoor affairs. At one of these entertainments on the Fourth of July, 1,184 of our patients participated, being out of doors for the greater part of the day, and a very satisfactory picnic lunch was provided for every one. The various organizations have also provided entertainments for our soldier patients as well as the regular inmates of the hospital.

RELIGIOUS SERVICES

Religious services have been conducted regularly each week by the Protestant, Hebrew and Catholic clergymen. We are particularly grateful to these clergymen for their services in cases of serious illness, their co-operation in answering our calls, and their attendance and visitation to our patients. I wish to express my appreciation to all the clergy who have been so considerate and whom I know at times have attended to our needs at a great sacrifice.

EMPLOYEES

In the past year our employees have formed an association and by means of committee have established a post-exchange. They have had at regular intervals, entertainments and gatherings for their own benefit and have most satisfactorily participated in the entertainments and affairs for amusement that have been conducted for the benefit of patients. The principle involved in their maintenance of the post-exchange is that, First, There may be provided for employees a convenience for obtaining candy, tobacco and small articles without the necessity of leaving hospital grounds; Secondly, That there may be an income from the sale of such articles to be used for the benefit of the Association and plans are made and well on their way toward execution for provision of quarters suitable for their own gatherings.

It may be of considerable interest to you to study the statistical facts as to employment in the various services of the hospital as indicated in the table below. It is obvious that there is a tremendous turnover in the employment of personnel for such an institution as this. By far the greatest turnover is in the ward service. I respectfully submit these figures for your study and consideration and if there is any solution to this problem I am anxious for assistance, and I assure you it involves much more than is apparent on the surface.

	<i>Number employed during year</i>	<i>Full Quota</i>	<i>% of Re-employment</i>
Medical	17	12	41%
Administration	27	24	8
Kitchen	29	19	52
Domestic	68	36	88
Ward, Male	259	77	236
Ward, Female	189	82	130
Industrial	9	6	50
Engineering	19	18	3
Repairs	12	12	0
Farm	26	17	52
Garage	6	4	50
	661	307	115%

GENERAL REPAIRS AND IMPROVEMENTS

Construction of salvage shed, and yard surrounded by riot fence and gate. Sheathing in cow barn, brick cottage for patients. Kenney House, and root cellar shingled with asphalt shingles. Hay barn and carriage shed completed. Brick barn has had repairs to roof, walls and eaves. The roof of main hospital building has been reslated. The paint shop has been tinned for fire protection. Terrazzo floors installed in lavatories of Nurses Home and plumbing renovated. New entrances to the hydrotherapeutic rooms have been constructed. Electric transmission line to these rooms was reconstructed. Bathroom built for officers' quarters. Service building at Borden Colony has had a cement basement with toilet facilities for patients' convenience installed, making a place for their convening before and after meals. The congregate dining rooms have been screened. Fire escapes have been added to the rear of main building and fire escape repaired on Industrial Building. Outside trimmings of the main buildings and guards have been painted. Under repairs ordinary, several wards have been entirely renovated, lavatories of male side have had terrazzo floors laid and plumbing modernized with installation of flush valves, and three wards on female wings similarly treated. Outside street lights were installed over doorways. Cement sidewalks added to rear of main building and from Male Home to Male Infirmary. Garage has had tool room and equipment added, and repair cost on cars has been reduced 50%. A grain room has been made from an abandoned farm building. This room is vermin proof and has a capacity of five carloads. An additional dining room has been made in rear centre by utilizing space previously used as a passageway. A call bell system has been installed throughout wards and rear centre, operated from switchboard in the main office. On grounds 6,000 trees were planted.

During the past year four boilers have been reset, six hand stokers installed with draft gauges and CO₂ recorders installed in boiler plant. Deolizer and fittings have also been installed and connected. Piping throughout the boiler plant and much of the basement has been recovered. Installation of return traps for steam to infirmary and garage where steam formerly went to waste. Installed reduction valves on main steam arteries, resulting in a saving of steam and water. Additional water supply to infirmary and industrial building from city main has been connected to increase pressure and install stand pipes for fire protection.

In the laundry there has been added a tumbler dryer, metal dryer and long press. There has also been inaugurated an exchange system for ward bedding and linens. The laundry quota of employees has been reduced from 18 to 12 with increased production of work, and employees' laundry is done on a slip system that is equal to the service of a commercial plant.

ACKNOWLEDGMENTS

I wish to express my appreciation to the various organizations, societies and individuals who have been generous in their donations of gifts such as candy, fruit, reading matter, etc., and to all who participated in entertainments. These entertainments have been greatly enjoyed by the patients.

To the Board of Trustees I wish to express my sincere thanks for their assistance, counsel and support.

Respectfully submitted

RANSOM A. GREENE, *Superintendent.*

TREASURER'S REPORT

To the Department of Mental Diseases

I respectfully submit the following report of the finances of this institution for the fiscal year ending November 30, 1924.

CASH ACCOUNT

<i>Income</i>	<i>Receipts</i>	
Board of inmates		
Private		\$23,762.16
Reimbursements, insane		55,869.12
		<hr/>
		\$79,631.28

Sales

Travel, Transportation and Office Expenses	\$63.01	
Clothing and Materials	226.25	
Medical and General Care	8.75	
Farm
